

tkcFTP

tkcFTP is an easy-to-use ftp client for the Zaurus.

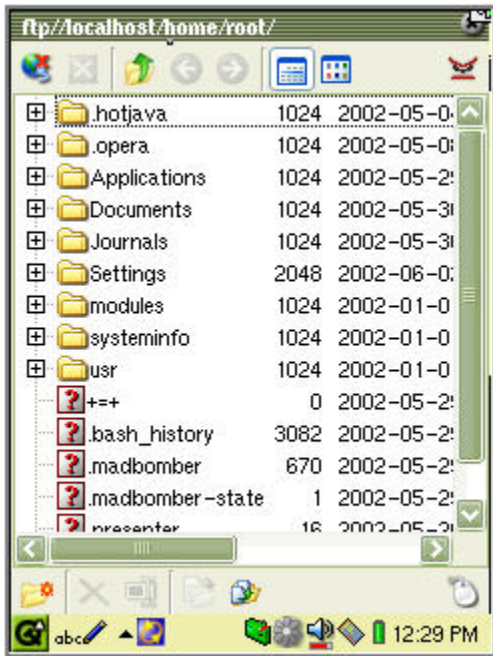

Once installed, open up the program and you will see this screen:

To Add a New Connection:

1. Tap  on the bottom right (next to the X)
2. Name the Connection.
3. In the Server box, enter the IP address or hostname of the FTP server you wish to connect to.
4. Enter the port number. (Normally 21 unless the default has been changed).
5. Enter the path to the files you wish to transfer. (Necessary if access is restricted).
6. Enter User and Password information if required.
7. Press on the connect button.

Button Explanations:

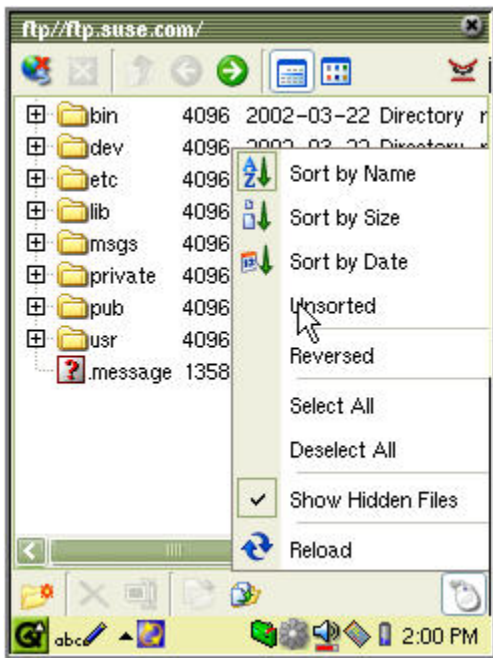

(Top bar from left to right)

1.  Disconnect
2.  Break current operation (not fully functional yet)
3.  Move up 1 level
4.  Go back 1 level
5.  Go forward 1 level
6.  Details view
7.  Multi-Column view

(Bottom bar from left to right)

1.  Create directory on remote PC
2.  Remove selected file from remote PC
3.  Rename selected file on remote PC
4.  Download selected file from remote PC
5.  Upload file from local to remote PC

6.  Like an “Options” button. Pop-up Menu appears:

To Download file from Remote PC:

1. Select the file you wish to download.
2. Tap  (4th button, bottom bar).
3. Select destination directory on Z.
4. Click OK in upper right corner.

To Upload file to Remote PC:

1. Select the file on Z you want to upload.
2. Tap  (5th button, bottom bar)
3. Select destination directory on remote PC.
4. Click OK in upper right corner.

Note: Removing directory from Remote PC returns an error (500 Syntax error, command unrecognized), but it removes the directory after clicking OK.
